

PixPlay Cloud Base Project

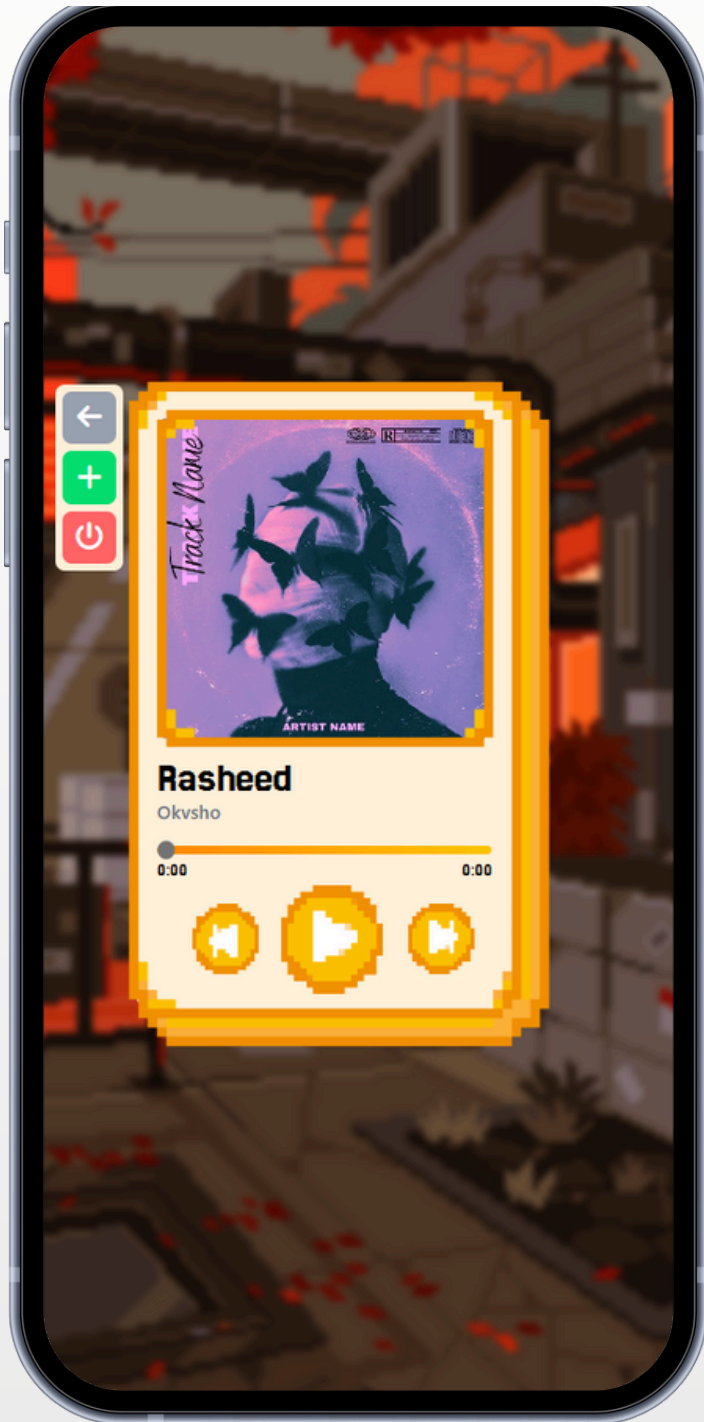

The need to apply Cloud Computing concepts in a **real-world project**. Inspired by platforms like Spotify.

To build a **functional**, full-stack web application.

To implement a **secure** and modern architecture (REST API, JWT).

To implement a CI/CD pipeline for **automated** deployment on Google Cloud Platform.

To apply development **best practices** (Clean Code, Version Control).

Requirement

● Specification

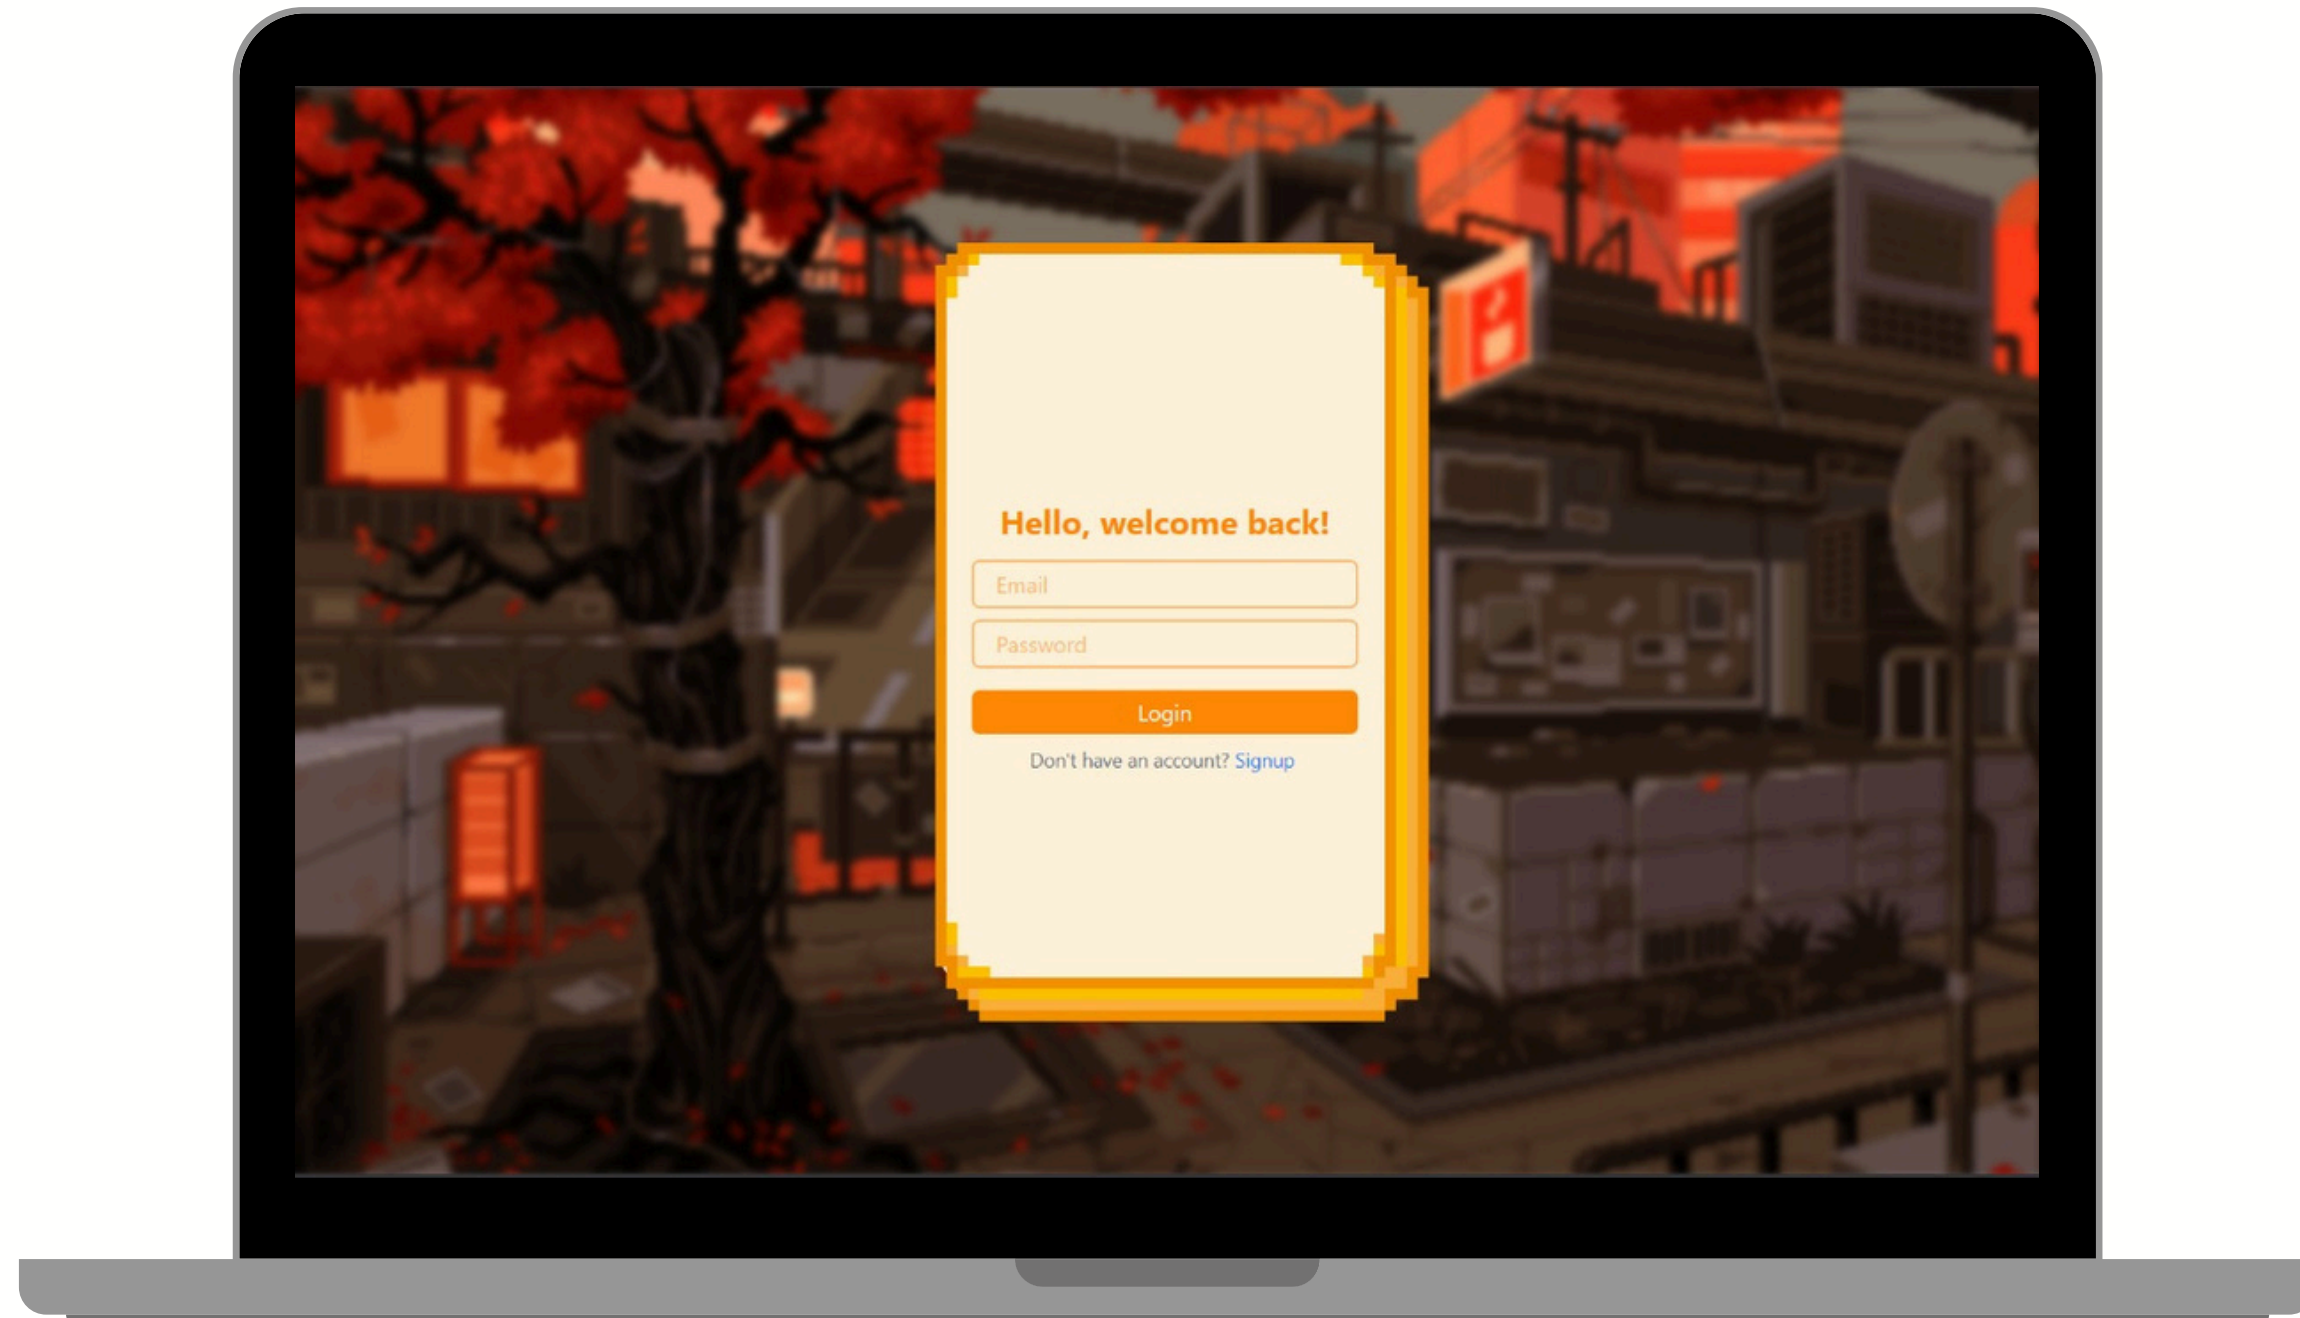

Main Feature

- Full Playlist Management (CRUD)
- system that automatically tests, builds, and deploys your application whenever you push new code to GitHub.
- hands-on experience with a major cloud provider (Google Cloud Platform) to implement a sophisticated workflow.
