

Nandisya Faiz Effendi

faizeffendi2004@gmail.com | [linkedin.com/in/faizeffendi](https://www.linkedin.com/in/faizeffendi) | (+62) 82119106458 | Yogyakarta, Indonesia.

PROFILE

Freshly graduate from Bachelor of Computer Science with hands-on experience in real-world projects, proven through Bangkit Academy and Laboratory Teaching Assistant. Skilled in Python and JavaScript, demonstrating capability in building AI/ML pipelines, web application development, and automated CI/CD deployment. Has strong adaptable growth mindset and collaborative teamwork abilities while facilitating interactive learning environments as a Teaching Assistant.

EDUCATION

Universitas Pembangunan Nasional “Veteran” Yogyakarta

2022 – March 2026

Bachelor Degree of Informatics

- GPA: 3.80 out of 4.00
- Organization: Head of Media at Information Technology Club, Deputy Head of Media and Information at Himpunan Mahasiswa Informatika.
- Relevant coursework: Object Oriented Programming, Data Science, Machine Learning, Statistics, Intelligent and Decision Support Systems, Data Base, Cloud Computing Technology.

WORK EXPERIENCE

Data Science Teaching Assistant | UPN “Veteran” Yogyakarta

September – December 2025

- Assisted two practicum classes with 40+ students, including assessing 13+ final projects.
- Enabled students to perform end-to-end data workflows (data collection, preprocessing, modeling, and model evaluating).
- Delivered practical sessions on K-Means, Naïve Bayes, Random Forest, Linear Regression, and related ML algorithms using Python and Scikit-learn.

Machine Learning Engineer | Bangkit Academy by Google

September - December 2024

Independent study program (MSIB) by Google, GoTo, and Traveloka. Enhancing my skills in Deep learning using TensorFlow, data analysis, and real-world project.

- Processed, analyzed, and extracted insights from multiple datasets (up to thousands of records) through EDA, feature engineering, and statistical analysis.
- Built and trained deep learning models using TensorFlow, earned 93.7 in the TensorFlow Developer Certificate and maintained 92–94 performance across ML coursework.
- Developed a machine learning model for image classification utilizing transfer learning with MobileNet V2, achieving over 95% accuracy in predicting 5 retail product classes.

PROJECTS

Hybrid RAG for Indonesian Labor Law Q&A System

October 2025 – March 2026

- Reproduced the GraphRAG architecture introduced by Edge et al. (Microsoft Research, 2025), combining knowledge graph traversal and vector-based semantic search to improve contextual grounding.
- Converted unstructured Indonesian labor law documents into a fully structured JSON format using Python and Regular Expression (Regex).
- Successfully enhanced small LLM model (GPT-4o-mini) Answer Relevancy score from 0.727 to 0.903, validated through rigorous automated testing using the RAGAS evaluation framework.

Tunas: Secure Stock Monitoring Mobile App

June 2025

github.com/faiz-effendi/tpm_stocks_market.git

- Developed a cross-platform Minimum Viable Product (MVP) for stock monitoring using the Flutter framework.

- Transformed raw API data into structured insights, integrated a local Hive database for seamless watchlist management, and utilized Google Maps API.

PixPlay: Retro Music Player Web App

May 2025

github.com/faiz-effendi/final-project.git

- Develop an fullstack web application using React.js for the frontend service and Express.js + SQL for the backend service.
- Deployed all services including CI/CD pipelines on Google Cloud Platform and Docker.
- Utilizing Git and GitHub as version control system to manage feature branches and code integration.

Computer Vision Model – Gloo Mobile App

December 2024

github.com/CuPid168/Gloo

- Collected thousands of images through web scraping, then labeled and organized the dataset using Roboflow.
- Developed a machine learning model for image classification utilizing transfer learning with MobileNet V2, achieving over 95% accuracy in predicting 5 retail product classes.
- Integrating machine learning model into mobile-based application using Tensorflow Lite.

SKILLS

Skills: Problem Solving, Team Work, Python, Javascript, Flutter, OOP, SQL.

Tools: Visual Studio Code, GIT & GitHub, Google Cloud Platform, Docker.
